

Summary

Three-phase wye buck-boost transformer. Steps down 427V to 400V at 90 amps continuous output. 62.35 kVA capacity. NEMA 3R enclosed, cETLus listed, wall mount.

Product Description

This unit corrects a 427V three phase building supply to 400V wye at the point of use, permanently, without modifying the building's electrical service. Designed for equipment rated 400V that is installed on a 427V system experiencing overvoltage from the utility.

Configured as a wye autotransformer, the unit handles only the difference between input and output and not the full load. This is why a 90-amp buck-boost transformer is significantly smaller and lighter than a 90-amp isolation transformer. The encapsulated core construction eliminates audible hum and provides stable thermal performance under continuous duty.

Features a removable wiring compartment door, removable knockout plate, and six NPT knockouts for flexible conduit entry. Surface mounting bracket for easy wall mount installations.
