

Summary

Three-phase wye buck-boost transformer. Steps down 528V to 480V at 45.8 amps continuous output. 38.08 kVA capacity. NEMA 3R enclosed, cETLus listed, wall mount.

Product Description

This unit corrects a 528V three phase building supply to 480V wye at the point of use, permanently, without modifying the building's electrical service. Designed for equipment rated 480V that is installed on a 528V system experiencing overvoltage from the utility.

Configured as a wye autotransformer, the unit handles only the difference between input and output and not the full load. This is why a 45.8-amp buck-boost transformer is significantly smaller and lighter than a 45.8-amp isolation transformer. The encapsulated core construction eliminates audible hum and provides stable thermal performance under continuous duty.

Features a removable wiring compartment door, removable knockout plate, and six NPT knockouts for flexible conduit entry. Surface mounting bracket for easy wall mount installations.
